

Proposed Solution

Project Name: ComicCraft – AI Comic Story Creator using Gemini Models

ComicCraft is proposed as a web-based AI application that converts a user's creative idea into a structured comic with story content, narration, dialogue, panel illustrations, preview, and PDF export.

Solution Component	Proposed Approach	Purpose
User Input Interface	Web form for story prompt, character, setting, story tone and art style.	Collects the creative requirements needed to generate the comic.
AI Comic Generation	Use Google Gemini models to generate a structured comic outline and panel-level content.	Transforms the user's idea into an organized comic storyline.
Narration & Dialogue	Generate narration, captions and dialogue for the comic panels.	Provides the textual storytelling content required for each panel.
Panel Illustration Generation	Generate panel images from panel-level illustration prompts.	Adds visual illustrations to the generated comic.
Comic Preview	Display generated panels, images and narrative content in the web interface.	Allows the user to review the completed comic before export.
PDF Export	Combine comic panels and narrative content into a downloadable PDF.	Produces a final shareable comic document.

Proposed Solution Flow

1. User Input	Story prompt, character, setting, tone and art style.
2. AI Story Generation	Gemini generates outline, narration, dialogue and structured panel data.
3. Panel Generation	AI image workflow creates panel illustrations.
4. Comic Preview	User reviews the generated comic.
5. PDF Export	Panels and narrative are compiled into PDF.
6. Download	Finished comic is downloaded.

Expected Outcome

The proposed solution provides a single web-based workflow for turning a user's creative prompt into a complete AI-generated comic. It integrates structured story generation, panel illustration, preview, and PDF export so the user can obtain a finished comic from one application.
