

ComicCraft – AI Comic Story Creator using Gemini Models

2. Requirement Analysis – Solution Requirements

The solution requirements describe the capabilities needed for ComicCraft to accept a user's creative idea, generate a structured comic using AI, produce panel illustrations, present the result, and export the completed comic.

1. User Input Requirements

Requirement	Description
Story Prompt	The system should accept the user's comic/story idea as the main creative input.
Character	The user should be able to provide the main character information used in the generated comic.
Setting	The user should be able to specify the story setting or environment.
Story Tone	The system should accept a desired tone for the generated story.
Art Style	The user should be able to select or provide an art style for the comic illustrations.

2. AI Generation Requirements

Component	Required Solution
Comic Outline	Generate a structured outline for the comic from the user's input.
Narration & Dialogue	Generate narrative text and dialogue appropriate to the comic panels.
Panel Generation	Create panel-level content and illustration prompts from the generated comic structure.
Illustrations	Generate visual content for the comic panels.
Structured Output	Keep generated comic information in a structured form so it can be displayed and exported.

3. Application & Output Requirements

Requirement	Description
Web Interface	Provide a web interface through which the user enters comic details and starts generation.
Comic Preview	Display the generated comic panel-by-panel with the associated visual and narrative content.
Media Handling	Store and serve generated panel images and other required media assets.
PDF Export	Combine the generated comic content into a downloadable PDF.
Completion Flow	Allow the user to review the result and download the finished comic.

Solution Flow

User Input → FastAPI Application → AI Comic Outline → Narration / Dialogue → Panel Illustration Generation → Comic Preview → PDF Export → Download
